

Claims

What is claimed is:

1. A leg brace for a person, said leg brace being formed of a generally planar sheet of elastomeric material and having a pair of adjustment ends or tabs connected by interdigitating straps permanently secured to a central body portion whose ends are secured thereby, to said brace's outer elastomeric fabric surface by means of Velcro hook and loop closures located at the inner surface of the tab ends.
2. The brace of claim one further comprising a central portion and having a girth and height to support a calf, knee, thigh or other body part.
3. The brace of claim one further having an interdigitating strap design allowing for the rapid, secure deployment and fitting of the brace by simultaneously tensioning its two tab ends.
4. The brace of claim one further allowing for the securing of same in registration with the patellae when used as a knee brace and biasing of the patella due to simultaneous tab tensioning.
5. The brace of claim one that also allows for the support of the thigh or calf without patellar opening when used for same.
6. The brace of claim one that further has an adjustable girth to fit of a wide range of sizes.
7. The brace of claim one whose design permits its use on either leg.
